AMENDMENT TO THE CLAIMSLISTING OF CLAIMS

- 5 1. (Original) A stain-resist composition comprising:  
a crosslinking agent comprising at least one polymer having at least two hydroxyl groups; and  
a stain-resist agent comprising at least one polymer.
- 10 2. (Original) The stain-resist composition, according to Claim 1, wherein said crosslinking agent is a polybutadiene having at least two hydroxyl groups.
3. (Original) The stain-resist composition of Claim 2, wherein said polybutadiene is hydroxyl-terminated.
4. (Original) The stain-resist composition, according to Claim 2, wherein said polybutadiene is further functionalized with at least one epoxy group.
- 15 5. (Original) The stain-resist composition of Claim 3, wherein said hydroxyl terminated polybutadiene is grafted with maleic anhydride.
6. (Original) The stain-resist composition of Claim 1, wherein said crosslinking agent contains at least one vinyl group.
- 20 7. (Currently amended) The stain-resist composition of Claim 1, wherein said stain-resist agent is a polymer selected from the group consisting of polymethacrylic acid, and hydrolyzed maleic anhydride copolymerized with at least one monomer, and mixtures thereof.
8. (Original) The stain-resist composition of Claim 7, wherein the number average molecular weight of said polymethacrylic acid is at least 300,000.
- 25 9. (Currently amended) The stain-resist composition, according to Claim 7, wherein said at least one monomer is selected from the group consisting of  $\alpha$ -olefins and styrenes.
10. (Original) The stain-resist composition of Claim 9, wherein said alpha-olefin is octene.
11. (Currently amended) The stain-resist composition, according to Claim 7, wherein up to 70 mole % of said maleic anhydride may be replaced by a monomer selected from the

Serial No. 10/808,814

group consisting of acrylic acid, methacrylic acid, itaconic acid, vinyl sulfonic acid, vinyl phosphonic acid, styrene sulfonic acid, alkyl (C<sub>1-4</sub>), acrylate, alkyl (C<sub>1-4</sub>) methacrylate, vinyl acetate, vinyl chloride, vinylidene chloride, vinyl sulfides, N-vinyl ~~pyrrolidone~~ pyrrolidone, acrylonitrile, acrylamide, and mixtures thereof.

- 5 12. (Original) The stain-resist composition of Claim 1, wherein said stain-resist agent further comprises a sulfonated phenol-formaldehyde condensation product.
13. (Original) The stain-resist composition of Claim 1, further comprising a pH-adjusting agent.
14. (Original) The stain-resist composition of Claim 13, wherein said agent adjusts the pH to  
10 from about 1 to about 8.
15. (Original) The stain-resist composition of Claim 13, wherein said agent adjusts the pH to from about 3 to about 4.
16. (Original) A process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, the process comprising contacting said polyamide substrate with a  
15 stain-resist composition comprising:  
a crosslinking agent comprising at least one polymer having at least two hydroxyl groups; and  
a stain-resist agent comprising at least one polymer.
17. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to  
20 a polyamide substrate, according to Claim 16, wherein said crosslinking agent is a polybutadiene having at least two hydroxyl groups.
18. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 17, wherein said hydroxyl groups are terminal to said polybutadiene.
- 25 19. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 17, wherein said polybutadiene is further functionalized with at least one epoxy group.
20. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to  
30 a polyamide substrate, according to Claim 16, wherein said crosslinking agent contains at least one vinyl group.

Serial No. 10/808,814

RD8510 US NA

21. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 18, wherein said hydroxyl-terminated polybutadiene is grafted with maleic anhydride.
22. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 16, wherein said stain-resist agent is a polymer selected from the group consisting of polymethacrylic acid and hydrolyzed maleic anhydride copolymerized with at least one monomer, and mixtures thereof.
23. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 16, wherein the number average molecular weight of said polymethacrylic acid is at least 300,000.
24. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 22, wherein said monomer is selected from the group consisting of  $\alpha$ -olefins and styrenes.
25. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 24, wherein said alpha-olefin is octene.
26. (Currently amended) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 22, wherein up to 70 mole % of said maleic anhydride may be replaced by a monomer selected from the group consisting of acrylic acid, methacrylic acid, itaconic acid, vinyl sulfonic acid, vinyl phosphonic acid, styrene sulfonic acid, alkyl ( $C_{1-4}$ ) acrylate, alkyl ( $C_{1-4}$ ) methacrylate, vinyl acetate, vinyl chloride, vinylidene chloride, vinyl sulfides, N-vinyl ~~pyrrolidone~~ pyrrolidone, acrylonitrile, acrylamide, and mixtures thereof.
27. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 16, wherein said stain-resist composition further comprises a sulfonated phenol-formaldehyde condensation product.
28. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 16, wherein said stain-resist composition further comprising a pH-adjusting agent.

Serial No. 10/808,814

RD8510 US NA

29. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 28, wherein said agent adjusts the pH to from about 1 to about 8.
- 5 30. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 28, wherein said agent adjusts the pH to from about 3 to about 4.
31. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 16, further comprising drying.
- 10 32. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 31, wherein said drying is carried out at temperature of from about 100° to about 190°C.
33. (Original) The process for imparting resistance to staining by coffee and/or acid dyes to a polyamide substrate, according to Claim 31, wherein said drying is carried out at temperature of from about 130° to about 150°C.
- 15 34. - 38. (Canceled)
